

DISCHARGE SUMMARY

FICTIONAL SAMPLE DOCUMENT — created for software testing. Not issued by any hospital, clinic or pharmacy. No real patient is represented. Not medical advice.

Facility	Example Medical Centre — Doha, Qatar
Document type	Discharge Summary — Cardiology
Patient	Mr. Ahmed Al-Karim (fictional)
Date of birth	14 February 1944
MRN	SAMPLE-2048-DOH
Admission	5 October 2026
Discharge	9 October 2026
Consultant	Dr. Yusuf Mansour (fictional), Cardiology

Diagnosis

Decompensated chronic heart failure with preserved ejection fraction, precipitated by dietary salt indiscretion. Background: hypertension, type 2 diabetes mellitus, dementia (Alzheimer type) under neurology follow-up.

Hospital course

Mr. Al-Karim was admitted with three days of worsening ankle swelling and breathlessness on lying flat. He was treated with intravenous diuretics and improved steadily; his weight fell from 76.2 kg on admission to 72.8 kg on discharge. Renal function remained stable. He was mobilising with a frame with one person assisting at the time of discharge.

Medication on discharge

Furosemide has been started at forty milligrams by mouth every morning. Bisoprolol is increased from 2.5 mg to 5 mg once daily in the morning. Metformin 500 mg twice daily with meals continues unchanged. Donepezil 5 mg at night and memantine 5 mg once daily continue unchanged as prescribed by neurology. Ibuprofen and other anti-inflammatory painkillers should be avoided; paracetamol 500 mg up to every six hours may be used for pain if needed.

Instructions for the family and carers

Please weigh him every morning after using the toilet and before breakfast, and write the weight in the diary. If his weight increases by more than two kilograms over three days, or if the ankle swelling or breathlessness returns, contact the heart failure nurse on the number below on the same day. Limit fluids to about 1.5 litres per day and keep added salt to a minimum. He should continue gentle daily walking as tolerated.

Follow-up

Heart failure clinic review in two weeks: Thursday 22 October 2026 at 09:30, Cardiology Outpatients, Building C, second floor. Blood tests (kidney function and potassium) should be taken at the outpatient laboratory one week after discharge, on or around 16 October. The existing neurology appointment is unchanged. Heart failure nurse (fictional): +974 4000 0000 ext. 1234, Sunday–Thursday 07:00–15:00.

Dr. Yusuf Mansour (fictional) — Consultant Cardiologist — 9 October 2026
