

FICTIONAL CLINICAL DISCHARGE SUMMARY

SAMPLE DOCUMENT — NOT ISSUED BY ANY HOSPITAL OR CLINIC

Facility	Example Medical Centre — Doha, Qatar
Document type	Discharge Summary / Follow-up Note
Patient	Mr. Ahmed Al-Karim (fictional)
Date of birth	14 February 1944 (fictional)
MRN	SAMPLE-2048-DOH
Admission date	20 September 2026
Discharge date	23 September 2026

Discharge diagnosis

Major neurocognitive disorder (dementia), suspected Alzheimer-type, without acute behavioral disturbance. The diagnosis and treatment plan below are fictional and provided solely as a document-design example.

Clinical summary

The fictional patient was evaluated for progressive short-term memory impairment, difficulty with instrumental activities of daily living, and intermittent disorientation. During the example admission, vital signs remained stable and no acute focal neurological deficit was documented. The patient was discharged in stable condition with family supervision and outpatient follow-up recommended.

Example discharge medications

Medication	Example dose	Directions	Duration
Donepezil 5 mg	5 mg tablet	Take 1 tablet by mouth nightly	30 days
Memantine 5 mg	5 mg tablet	Take 1 tablet by mouth once daily	30 days
Paracetamol 500 mg	500 mg tablet	Take 1 tablet every 6–8 hours as needed for pain	As needed

Follow-up / discharge instructions

- Follow up with a neurology or geriatric medicine clinic within 2–4 weeks.
- Family/caregiver supervision is recommended for medication administration and safety at home.
- Seek urgent medical attention for sudden confusion, weakness, loss of consciousness, chest pain, severe headache, or other acute symptoms.
- Medication doses in this fictional sample must not be used as real medical advice.

Attending Physician
Dr. Sara Hassan (fictional)
Example Medical Centre

Discharge date
23 September 2026
